1 Introduction

This document is an overview of defining the testing strategy for the Digital Aid web application. The Digital Aid project is made to make the emergency-aiding process easier and fairer. During the crisis of Bangladesh, most of the middle-class people and the poor ones left without earning. The project is made to provide humanitarian aid to needy people. The plan is to implement a system where each member of a household will be given an ID card for primary authentication. This way the donation can reach every household through a transparent process and also assure that no one receives the products repeatedly or products go to the wrong hands. The distribution process will be held by verified distributors and also can be monitored by the admin. In this document, various strategies & concepts of testing will be applied to make ensure the quality attributes of the Digital Aid web application.

1.1 Objectives

Digital Aid is an online platform that has been planned with the intention of making the process of distributing relief products efficient. During the crisis of Bangladesh, most of the the middle-class people and the poor ones left without earning. The government came forward with the intention of helping those who are suffering.

Phase 1 of the project will give an overview of the project. This will allow the test team to start understanding the test objectives & explore the tools that will be needed during the execution period. Phase 2 will give an overview of the execution of the tests & tools or software that was used during the execution.

1.2 Team Members

Table 1: Team Members

Number	Name	Role
1	abc	Project Manager
2	xyz	Quality Assurance Manager
3	Manan Ahmed Broti	Test Lead & development Manager

2 Assumptions / Risks

2.1 Assumptions

In this project, certain assumptions will be made:

- Proper requirements analysis will be done by business analyst team.
- The testing team will get daily updates from the development team.
- Proper resource allocation will be given by the company to the testing team.
- Testing team will be properly trained.
- Testing team will be given enough time for testing.
- Server will be maintain properly.

2.2 Risks

In this test plan there are some risks to the project with some features on the testing process.

Table 2: Risk Table

Risk Table				
#	Risk	Probability	Impact	RMMM
1	Requirements Inflation	80%	Medium	Proper Requirements analysis should be done
2	Late delivery of the software	80%	Medium	Software should be send for testing as fast as possible
3	Funding will be lost	40%	High	Proper initial plan for budget
4	Project contain with bug	80%	Medium	Bug should be checked again & again
5	Number of tests performed will be reduced	40%	Medium	Staff should be trained by expert
6	Lack of resources	50%	High	Resources should be available
7	Delays in training	60%	Low	Training should be properly done
8	System will be down for several times	80%	High	Server upping issues can be solved by the server admin
9	Lower quality delivery product	50%	High	Product should be properly tested before delivery

3 Test Approach

The Digital Aid web application is using an agile approach, with weekly iterations. At the end of each week the requirements identified for that iteration will be delivered to the team and will be tested.

New Research & Exploratory testing will play a large part of the testing as the team is new to using this type of tools and will be learning as they go. Tests for planned functionality will be created and added to Digital Aid as we get iterations of the product.

3.1 Testing Tools

Table 3: Testing Tools

Process	Tool
Automation Test Creation	TestProject, Katalon Studio
Test Case Execution	TestProject, Katalon Studio
Manual Test Case Creation	Microsoft Excel
Defect Management	Microsoft Word
Load Testing	JMeter
Test Reporting	Latex overleaf

3.2 Manual Testing

Manual testing is done throughout the entire application. The test cases are documented in Microsoft Excel. The test cases are given below:

Project Name Digital Aid

3.3 Test Automation

Test automation is a part of the testing process for the Digital Aid web application. As our project is a web-based application for test automation the current approach is to use TestProject & Katalon studio for UI testing. The steps include:

- Create & Record test cases in automation testing tools.
- Create job/test suit to organize test cases.
- Reuse test cases and implement the nested tests.
- Create data & use data driven testing.
- Use custom paths, parameters, verifications, validations & conditions, so that any changes made inside the module won't affect the expected results.

3.3.1 Functional Testing / Login Module

This test is done in Katalon Studio To check the login module of the Digital Aid web application. Input variables & validation is also implemented for effective testing.

3.3.4 Data Driven Functionality Test / Application Themes Test

This data-driven test case in TestProject is created to test the theme functionality of the web application. The parameter is given through a CSV file to compare the given RGB value with the Navbar & sidebar color value. 4 valid input & 1 invalid input is given to check the efficiency.

color_button	password	RGB_Color	username
Yellow	1234#1234	(251, 173, 76)	mnn
Coffee	1234#1234	(47, 24, 16)	mnn
Skyblue	1234#1234	(135, 206, 235)	mnn
White	1234#1234	(125, 89, 98)	mnn
Sky Blue	1234#1234	(135, 206, 235)	mnn

3.3.7 Load Testing

Since the website is on live to a subdomain, A load testing is executed using JMeter as an experiment on the first four-page to measure the performance. The users was set to 1000, ramp-up period was set to 1 second & loop was set to 1. The report shows a positive result on the experimental test.

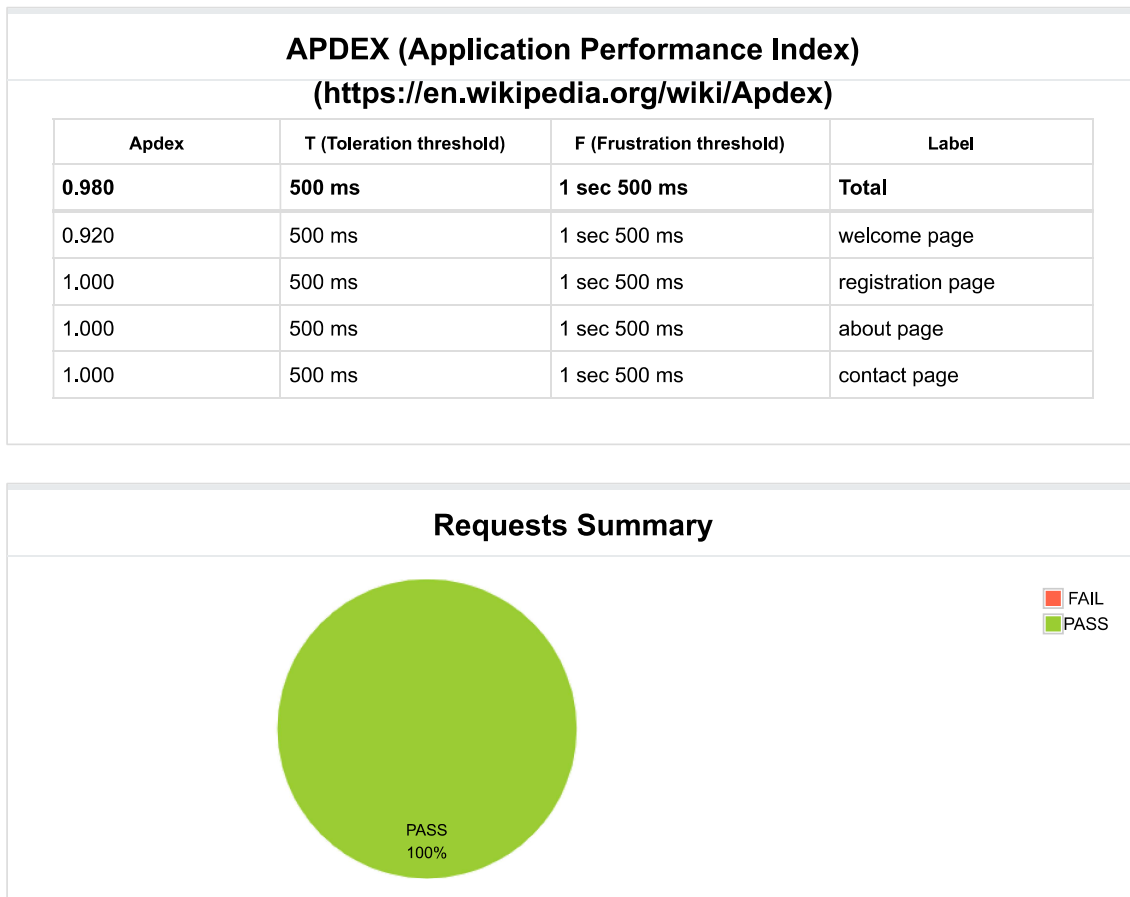

Figure 11: Jmeter testing summary

3.4 Bug Report

During the testing process of the Digital Aid web application, the test team could manage to find some bugs. The reports are documented in Microsoft Word.

Bug report for Registration Desktop View (1920px).

1. Issue ID: issue_001

Defect Description: Remember me checkbox doesn't work.

Reproducing Step:

- Open URL "<http://digital-aid.infinityfreeapp.com/>"
- Mark the "Remember Me" checkbox checked.
- Login to the system with a valid username & password.
- Now again open URL "<http://digital-aid.infinityfreeapp.com/>" in a new tab.

Environment: Google Chrome

Module: Header

Severity: Critical

Screenshot: https://drive.google.com/file/d/1tM58V_GNFyUm7tBA12k0CF9srpiUdOle/view

Responsible QA: Manan Ahmed Broti

2. Issue ID: issue_002

Defect Description: Remember me checkbox doesn't work.

Reproducing Step:

- Open URL "<http://digital-aid.infinityfreeapp.com/>"
- Mark the "Remember Me" checkbox checked.
- Login to the system with a valid username & password.
- Now again open URL "<http://digital-aid.infinityfreeapp.com/>" in a new tab.

Environment: Google Chrome

Module: Header

Severity: Critical

Screenshot: https://drive.google.com/file/d/1tM58V_GNFyUm7tBA12k0CF9srpiUdOle/view

Responsible QA: Manan Ahmed Broti

Figure 12: Bug report in Microsoft Word

4 Test Environment

4.1 Setting Up Application

For proper testing purposes the application has been set up to a subdomain with a CPanel & database access.

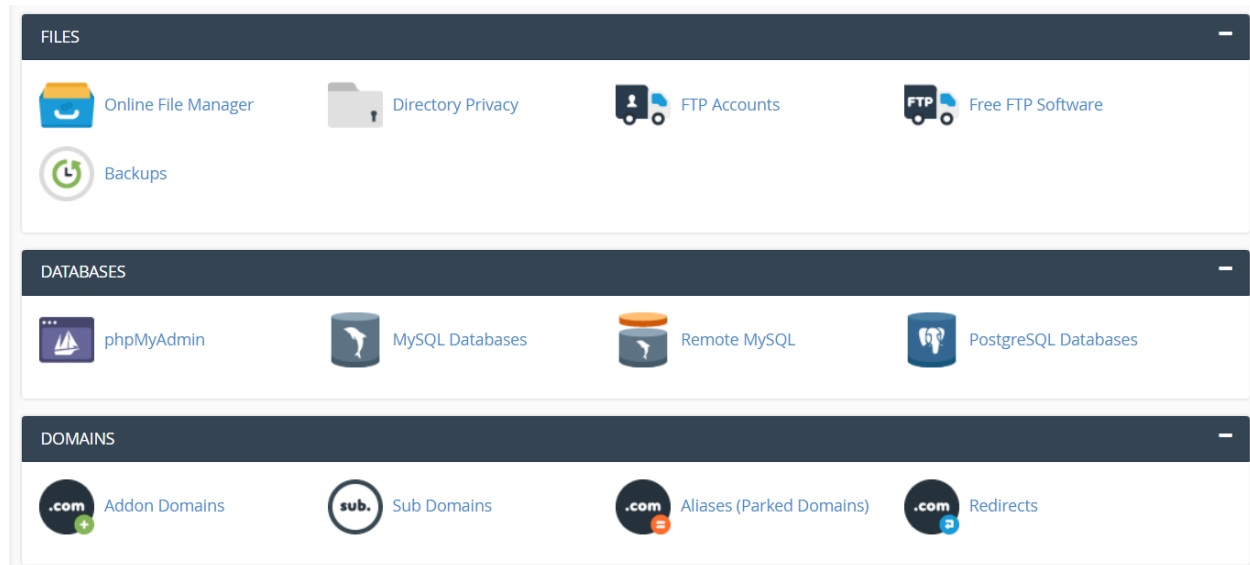

Figure 13: C Panel of Digital Aid

4.2 Hardware

Since Digital Aid is a web-based application any modern days computer with an internet connection will be enough for testing.

4.3 Software

For the purpose of reporting bugs & manual test cases Microsoft Word & Microsoft Excel have been used.

4.4 Tools

To set the environment for automation testing & test execution, automation testing tools such as TestProject, Katalon Studio and JMeter are used. Those tests are executed with a browser environment of Chrome & Microsoft Edge

5 Milestones / Deliverables

5.1 Test Schedule

Figure 14: Testing schedule

6 Summary

The tests show a positive overview & indicate the software is ready to be live on the server. As testing is necessary throughout the software development life cycle, more testing & updates are suggested & will be conducted throughout the lifecycle of Digital Aid. The latest updates on test plan documentation, detailed test cases & detailed automation reports are given & will be updated at the end of the document in the Appendix section.
